

FLOAT INSERTS /

NAHUAL

We added an extra set of inserts at the far back to use in those days with deep snow.

NCF CARBON BIAX /

AURORA

“Non Crimp Fabrics” (NCF) have better load capacity and less weight for the same mechanical characteristics than woven fabrics. This makes the board light for extra handling ability, gives supreme snap and unmatched stability when riding at high speed.

SINGULAR SIDECUT /

NAHUAL

A sidecut with single radius made for advanced and intermediate riders who already know how to carve a turn, want to ride fast and need their edge to hold a carve.

CARBONBON /

SPECTRUM / NAHUAL

Our 100% Carbon reinforcement is the ultimate upgrade to the boards. Placed between the base and the core to enhance responsiveness, pop and torsional stiffness.

ZERO CAMBER ROCKER /

NAHUAL

The ZERO CAMBER ROCKER profile will smooth your ride over uneven terrain plus the rocker in the nose adds float and pulls through.

ALL NEW TECH!

SLASH INGREDIENTS - 15/16

NFC CARBON BIAX /

AURORA

"Non Crimp Fabrics" (NCF) have better load capacity and less weight for the same mechanical characteristics than woven fabrics. This makes the board light for extra handling ability, gives supreme snap and unmatched stability when riding at high speed.

REACTIVE FLEX /

SPECTRUM / STRAIGHT / ATV

The most advanced board technology available today! A composition of two unique fiberglass layouts in combination with our wood cores that are specifically assembled and profiled by our engineers in Switzerland. Reactive Flex gives our boards the ability to also flex across the width. So, however you bend the board it will react the best way imaginable. For example if you jump on a park rail for a boardslide, the board edges lift up, creating a convex base which minimizes your chance of catching an edge. When carving a turn, it works the other way around. The board edges flex downward, creating a concave base which makes your edge bite more into the turns. This is automated flex in 3d!

TRIAx FIBERGLASS /

BRAINSTORM / NAHUAL / AURORA /

Triax Fiberglass provides superior pop, consistent torsional flex, and more overall response.

BIAX FIBERGLASS /

HAPPY PLACE / NAHUAL

The 0-90 Biax Fiberglass is the most versatile in the industry. It is bombproof and reliable for all terrain types.

LIGHTWEIGHT WOODCORE /

NAHUAL / AURORA

This is the lightweight composition to our wood cores, using light density Paulownia and light Poplar wood. Additionally we use the sturdy Beech in the middle for inserts retention but also on the outside next to the sidewalls for better on-edge stability.

FOREVER WOODCORE /

STRAIGHT / ATV

Combining four different lightweight wood species: paulownia, spruce, beech and poplar to create a premium wood core that reduces weight while increasing reactivity, pop and longevity in extreme conditions.

POP CORE /

HAPPY PLACE / SPECTRUM / BRAINSTORM

Pop Core is made out of alternating poplar and beech stringers that give it strength and liveliness. We've inlaid 4 sections of sturdy spruce into the tail and nose area to increase precision and get the best pop out of the board.

KNOCK OUT /

AURORA

We used our CNC machine, operated by precisely programmed commands to make a counterbalanced 3D slant between the bindings. This refinement makes a woodcore lighter and the sidewall thinner. The riding gets more enjoyable where the most grip is needed.

CARBONBON /

SPECTRUM / NAHUAL

Our 100% Carbon reinforcement is the ultimate upgrade to the boards. Placed between the base and the core to enhance responsiveness, pop and torsional stiffness.

BURIED TREASURE /

ATV

This is our ultimate combination of carbon, kevlar and basalt fibers. The effects are lightness because the connecting strength of fiber allows us to slim the cores thickness and it adds reactivity to the board, like response and torsion, because of its strategical placement.

SWEET SPOT /

HAPPY PLACE / BRAINSTORM

2 cross-shaped carbon fibers placed from the contact point of the nose and tail to the middle of the inserts. This configuration increases POP and strength, bringing more play into your riding.

LANDING STRIP /

BRAINSTORM / STRAIGHT / NAHUAL

2 strips of Kevlar and Carbon placed from the tail to the inserts and from the nose to the tip of the inserts. This will reduce high velocity quivers.

ULTIMATE TRACTION /

HAPPY PLACE / SPECTRUM / BRAINSTORM / STRAIGHT / ATV / NAHUAL / AURORA

Ultimate Traction is a small counter radius(bump) placed in the middle of the board's sidecut. With it we have improved edge hold and center. You will have more control of your board especially on ice, less fatigue turning the board and lots more fun!

REDLINE SIDECUT /

AURORA

The name is from the RPM of an engine. When the engine is running high its called; in the redlines of the speedometer. The idea is somehow to translate the riders behavior into the board. When pointing straight down the hill the rider is committed to go fast by loading his front foot, needing stability from his board. Does the rider actively want to slow down, the weight moves onto the backfoot to control the steering. Therefore I sat together with my brother, Ing. Werner Ruff who helped me refine riding stability and control by accurately composing this sidecut to be on demand.

SINGULAR SIDECUT /

NAHUAL

A sidecut with single radius made for advanced and intermediate riders who already know how to carve a turn, want to ride fast and need their edge to hold a carve.

PROGRESSIVE SIDECUT /

HAPPY PLACE / SPECTRUM / BRAINSTORM / STRAIGHT / ATV

The discussion of sidecut is simple, it makes the board turn. Now a step ahead we bring you progressive sidecut which is really beneficial with hybrid cambers as the contact points of the board become more relevant for smooth turns.

EDGES /

HAPPY PLACE / SPECTRUM / BRAINSTORM / STRAIGHT / ATV / NAHUAL / AURORA

Our edges have 35% more steel content than regular ones. They are simply stronger and more durable than the alternatives. They feel substantial and will take a beating.

TIP PROTECTORS /

HAPPY PLACE / SPECTRUM / BRAINSTORM / STRAIGHT / ATV / NAHUAL / AURORA

Thin and light, but surprisingly strong, aluminum protectors protect the board from the damage that can result from impacts. This small detail makes a big difference for the durability of the deck.

SLICK TIP PROFILE /

HAPPY PLACE / BRAINSTORM / STRAIGHT / AURORA

By reducing the wood thickness and removing the usual ABS parts at nose and/or tail, Slick Tip technology allows us to lighten up the board significantly but it also dampens vibrations and provides a unique light feel in turn transitions.

FLOAT INSERTS /

NAHUAL

We added an extra set of inserts at the far back to use in those days with deep snow.

CAMBER /

ATV

The camber profile is the traditional snowboard profile used since the beginning of snowboarding. The camber profile is designed to distribute weight evenly and increase pop. It will give you a really precise snowboard with a snappy, reactive feel.

DUAL CAMBER /

AURORA

Easy and precise by preserving the traditional cambers far out contactpoints. This subtle Dual Camber profile comes in as a pivoting relief, making a board easier to turn.

ZERO CAMBER /

SPECTRUM

This profile has no preload – meaning no camber nor rocker but still you get the combination between both. By using the full surface of the base it makes the board versatile and forgiving.

ZERO CAMBER ROCKER /

NAHUAL

The ZERO CAMBER ROCKER profile will smooth your ride over uneven terrain plus the rocker in the nose adds float and pulls through.

CAMROCK /

HAPPY PLACE

The CamRock design is very playful. The narrow contact points and the lifted tips make the board easy to turn. We added flat spots outside the bindings toward the tip and tail which give you all the pop you need to ollie over anything that lies in your path. The camber between your feet gives you stability and responsiveness in all conditions and terrain types.

BACKSEAT CAMROCK /

BRAINSTORM / STRAIGHT

Backseat CamRock gives you everything you need to slay your backcountry line. There is a touch more rocker in the nose to add float and improved maneuverability, matched with a small set-back camber between the bindings to keep your snowboard responsive.

SINTERED HD BASE /

BRAINSTORM / STRAIGHT / ATV / NAHUAL / AURORA

The fastest and densest sintered base on the market. It provides the most impact resistant surface available. This performance base will allow you to lead the pack wherever you are headed. Its high-density molecular structure holds wax longer.

SINTERED BASE /

HAPPY PLACE / SPECTRUM

This sintered base is fast, dense, durable, and ready to perform. It has been specially made for all your street and park needs. For quality purpose we only use sintered bases where most companies use extruded and low density base material.

DIAMOND STONE FINISH /

ATV / NAHUAL / AURORA

Diamond-structured stone grinding occurs on two axes to maximize glide, and to optimize the durability of the base. It eliminates the slow, suction feel that comes with one dimensional base finishes.

BELT FINISH /

HAPPY PLACE / SPECTRUM / BRAINSTORM / STRAIGHT

Belt Finish gets your base optimized before we fully wax the board.

KICK STAND /

HAPPY PLACE / SPECTRUM / BRAINSTORM / STRAIGHT / ATV / NAHUAL / AURORA

Our Identity shape saves material and weight but also stands up without tipping over like rounded boards do!

ONE BALL JAY /

HAPPY PLACE / SPECTRUM / BRAINSTORM / STRAIGHT / ATV / NAHUAL / AURORA

SLASH boards are ready to shred straight out of the shop and are factory waxed with OneBallJay wax. one-ball.com

QUALITY CONTROLLED /

HAPPY PLACE / SPECTRUM / BRAINSTORM / STRAIGHT / ATV / NAHUAL / AURORA

While we take great pride in the superiority of our products and believe that our multi-layered quality-control process is second to none, from time to time a small imperfection might slip out of the factory. Recognizing this, SLASH backs all of its products with a two-year warranty against material defects.
